

Autonomous Machine Learning

Marija Jegorova

- Mostly interested in reinforcement learning, multi-task and multi-domain learning
- Now focusing on multi-domain learning, trying to find a way of identifying the domain from the input data, without domain being explicitly labelled
- Right now using a neural net proposed by Yang & Hospedales 2015 as a basis for my experiments; so far introducing a pre-trained $x \rightarrow z$ link at the training stage gave some positive results
