# Scientific analytics of green everyday internet of chemistry things

Tayyaba Irum

- **To promote improved citizen science using IoT**
  e.g., to monitor Air Quality (AQ). Challenges:
  - Low cost **IoT kits hard to make robust, low maintenance, etc.**
  - **Need Science driven knowledgebase to guide users** of IoT that is able to raise scientific awareness with users at different levels
  - Successful citizen scientist movement needs to be multi-disciplinary, **to facilitate participants to become self-sufficient in both the technology and science to a satisfactory degree**
  - **GRADFEST Event 20-21/02 - please participate**
