World-Wide Content Availability

Architectural Decisions

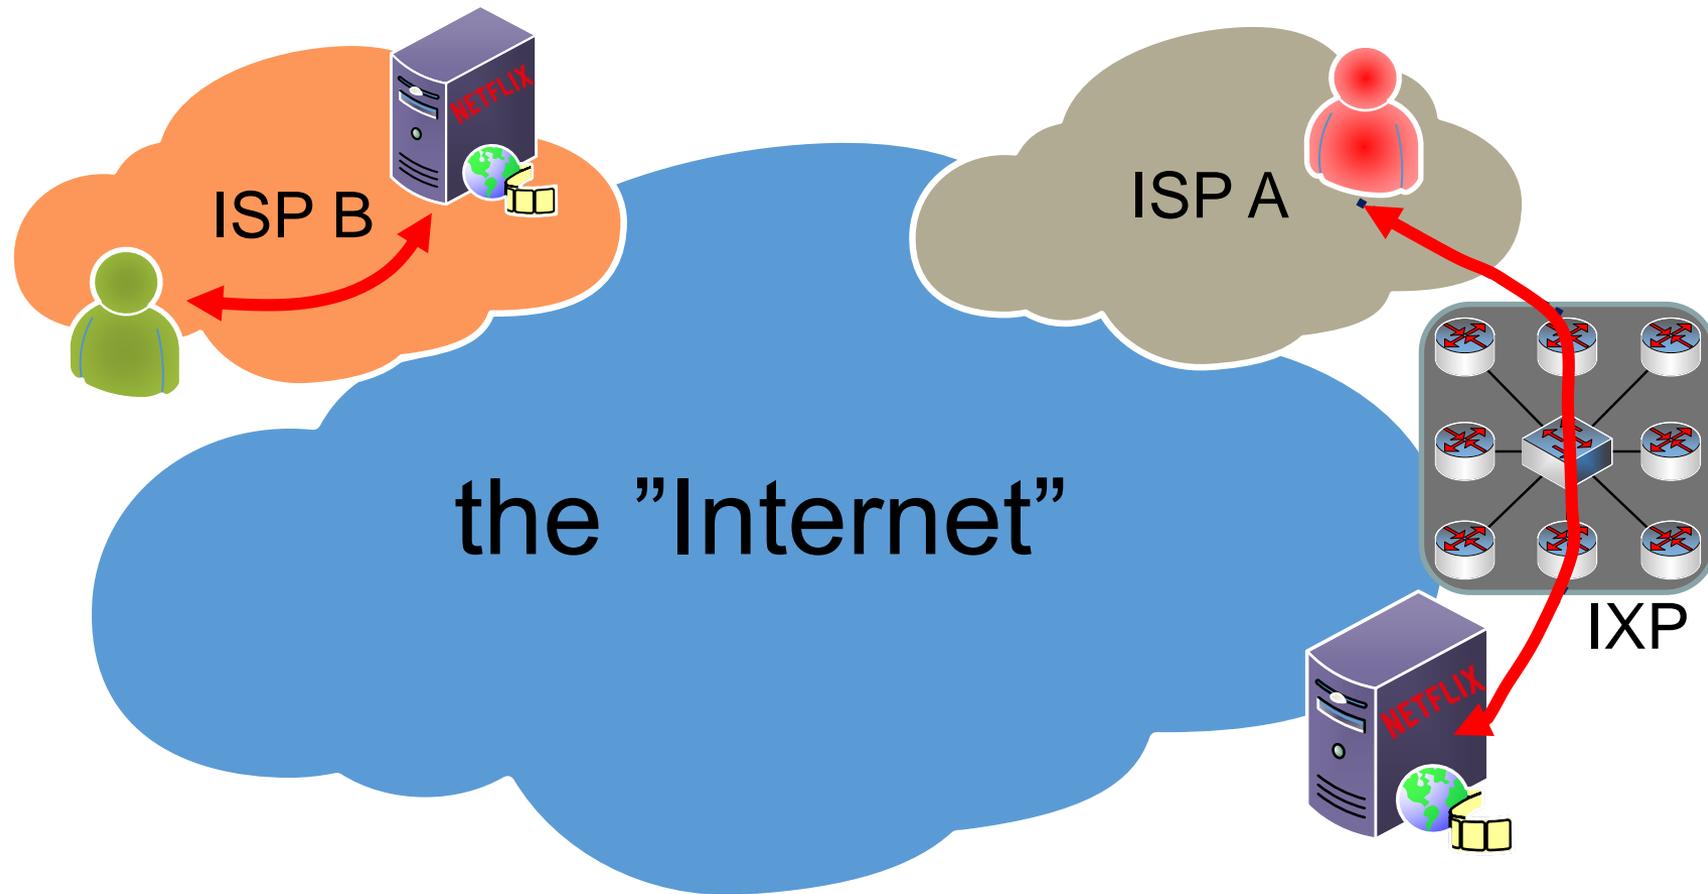

Netflix's Architecture

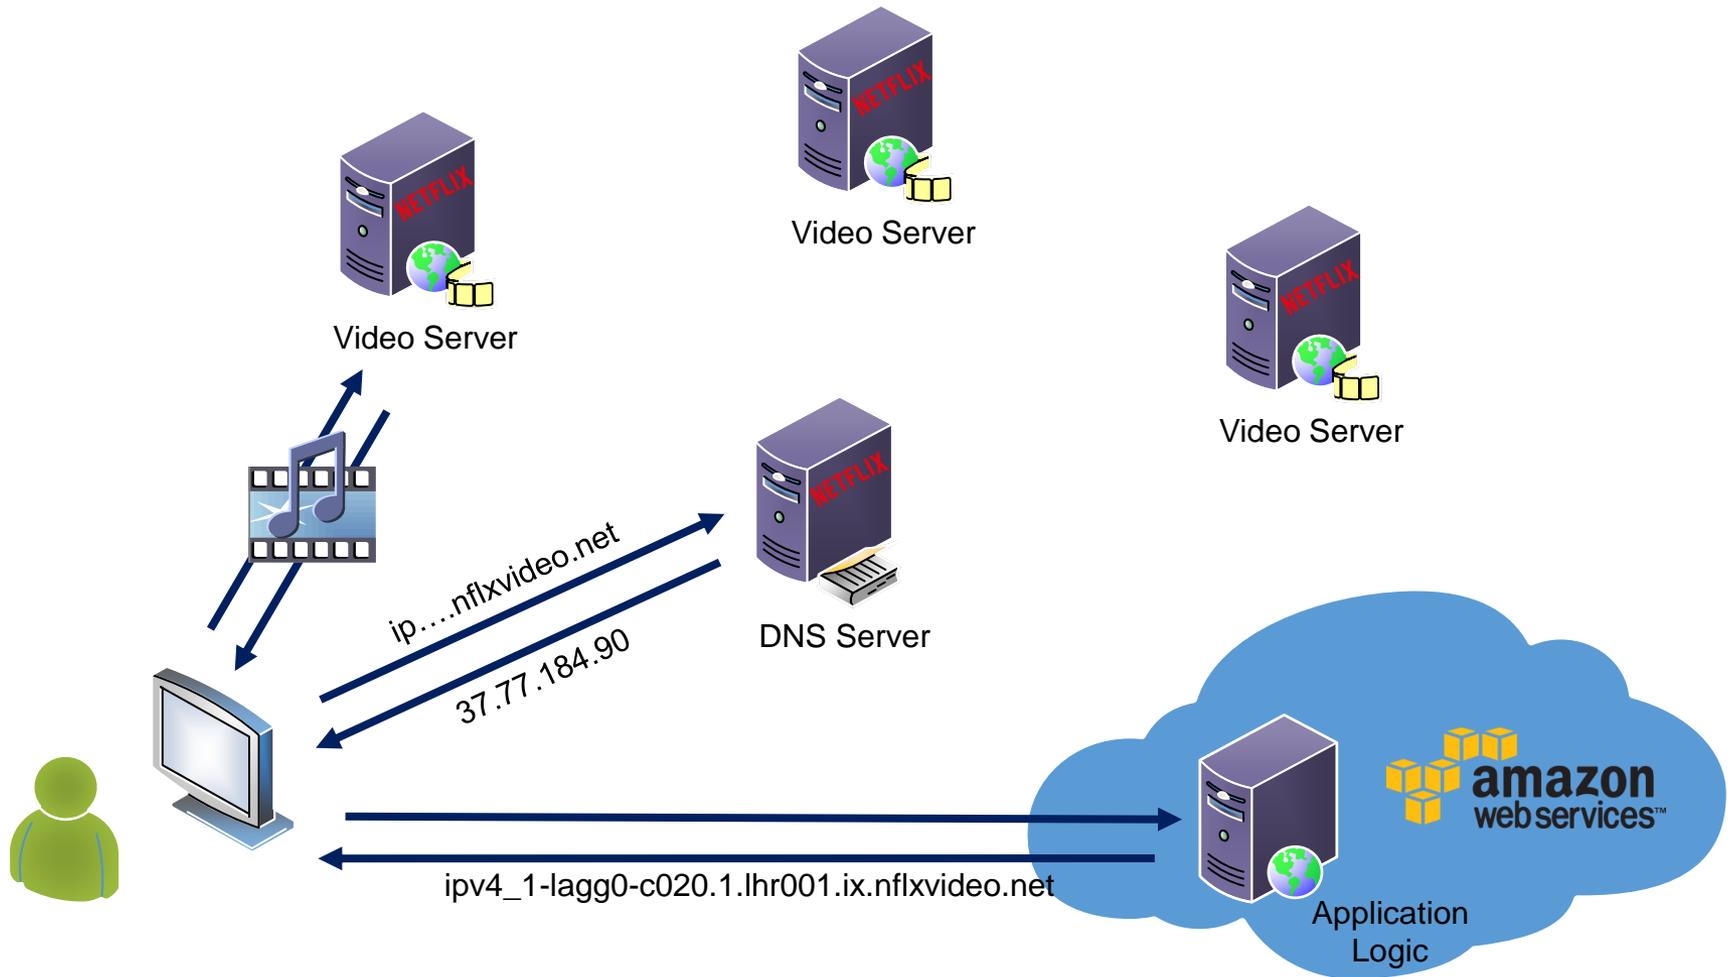

- Datacentre-free since January 2016
- Many services on Amazon Web Services
- Netflix deployed its own CDN: OpenConnect

Netflix OpenConnect Delivery Options

Netflix Client Redirection

Exploiting the Naming Scheme

- DNS names of servers used by Netflix:
 - ipv4_1-lagg0-c020.1.**lhr**001.**ix**.nflxvideo.net
 - ipv4_1-cxl0-c045.1.**fra**001.**ix**.nflxvideo.net
 - ipv6_1-lagg0-c002.1.**lhr**005.**bt.isp**.nflxvideo.net

- Using a DNS crawler, we discovered
 - 4,777 servers
 - 243 locations
 - 48 countries
 - 123 ISPs

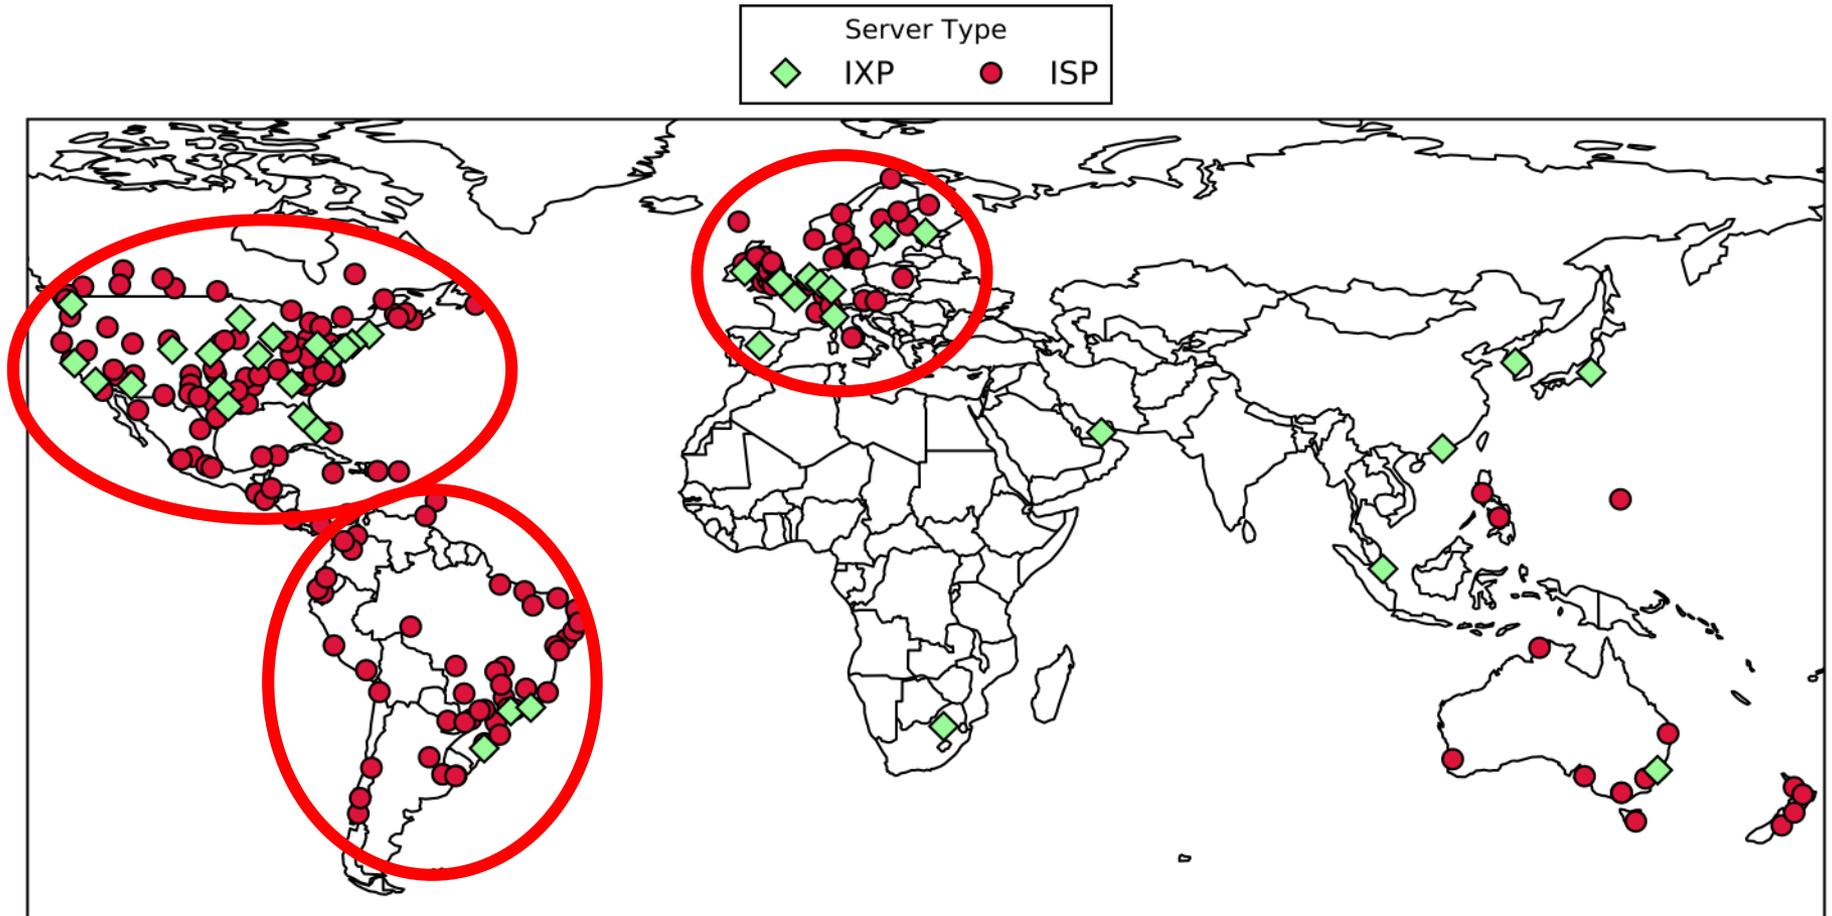

Traffic: Exploiting IPID

- IPID
 - Field of the IPv4 header
 - Originally used for fragmentation
 - Can be incremented arbitrarily, though often incrementally [RFC6864]
- All Netflix caches run FreeBSD 10
- Checked that consistent values of the IPID field returned
- 1 sample per server every 30 mins to reduce overhead

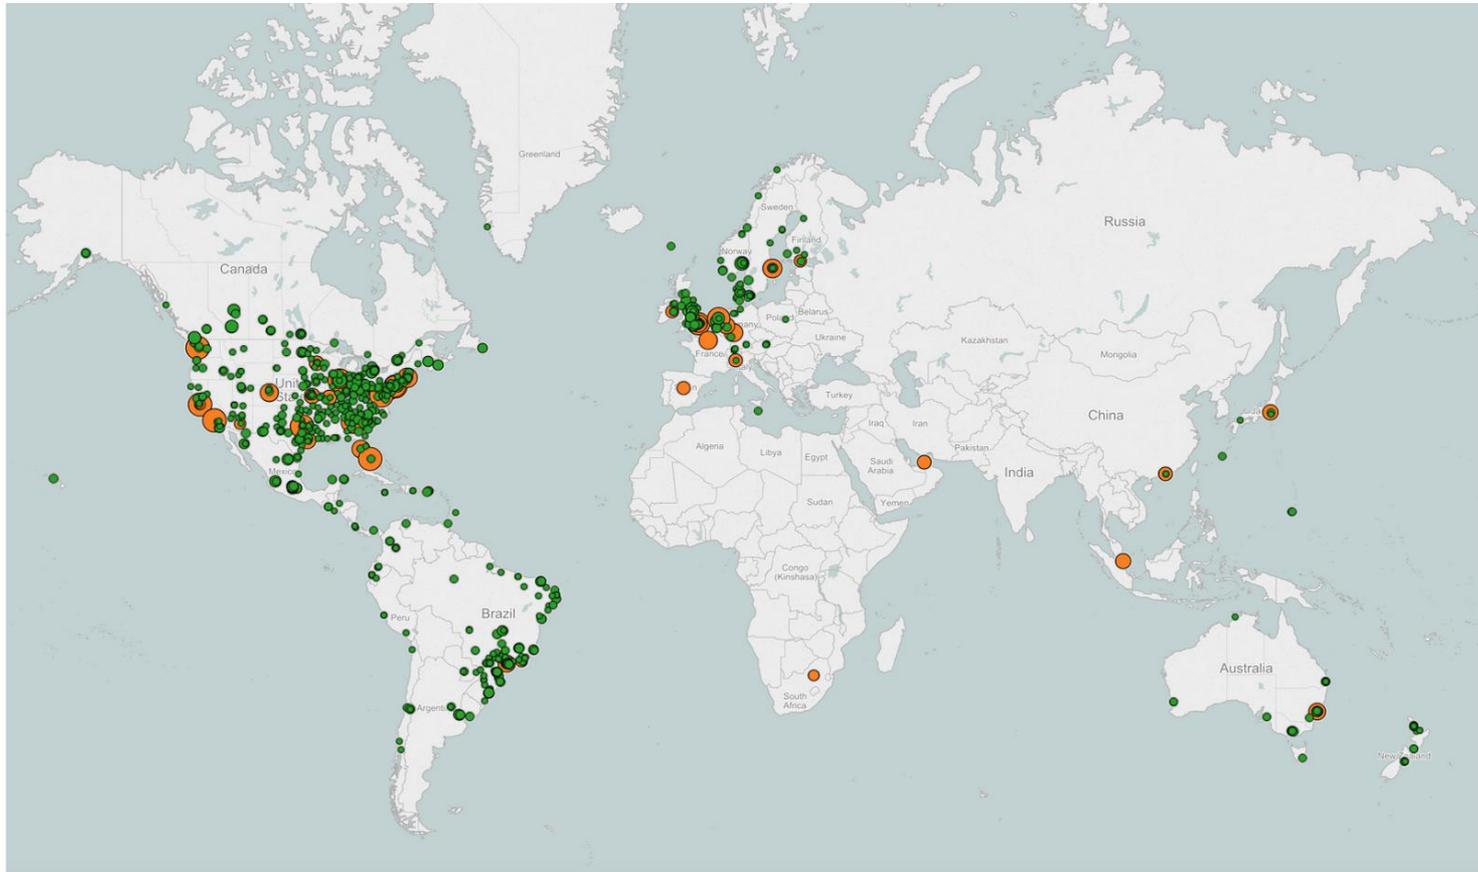

World-Wide Content Availability

Global Netflix deployment (locations)

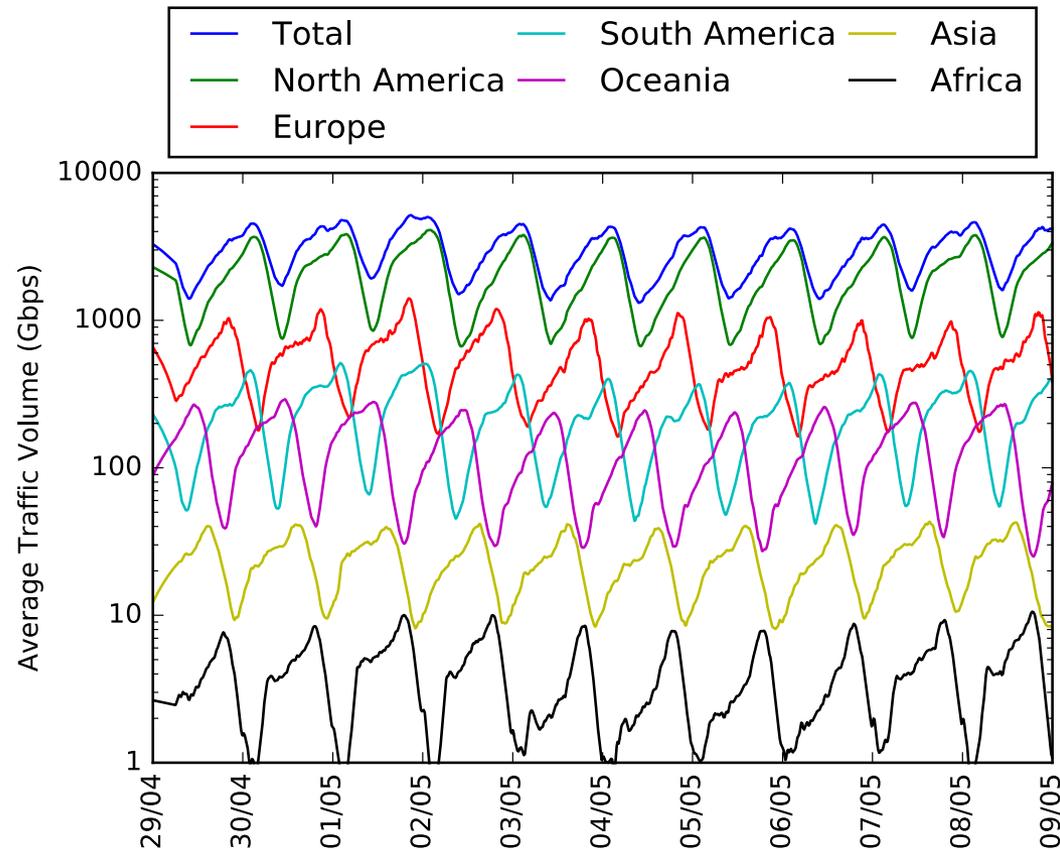

Deployment according to Netflix

■ ISP Locations ■ Internet Exchange Point (circles are sized by volume)

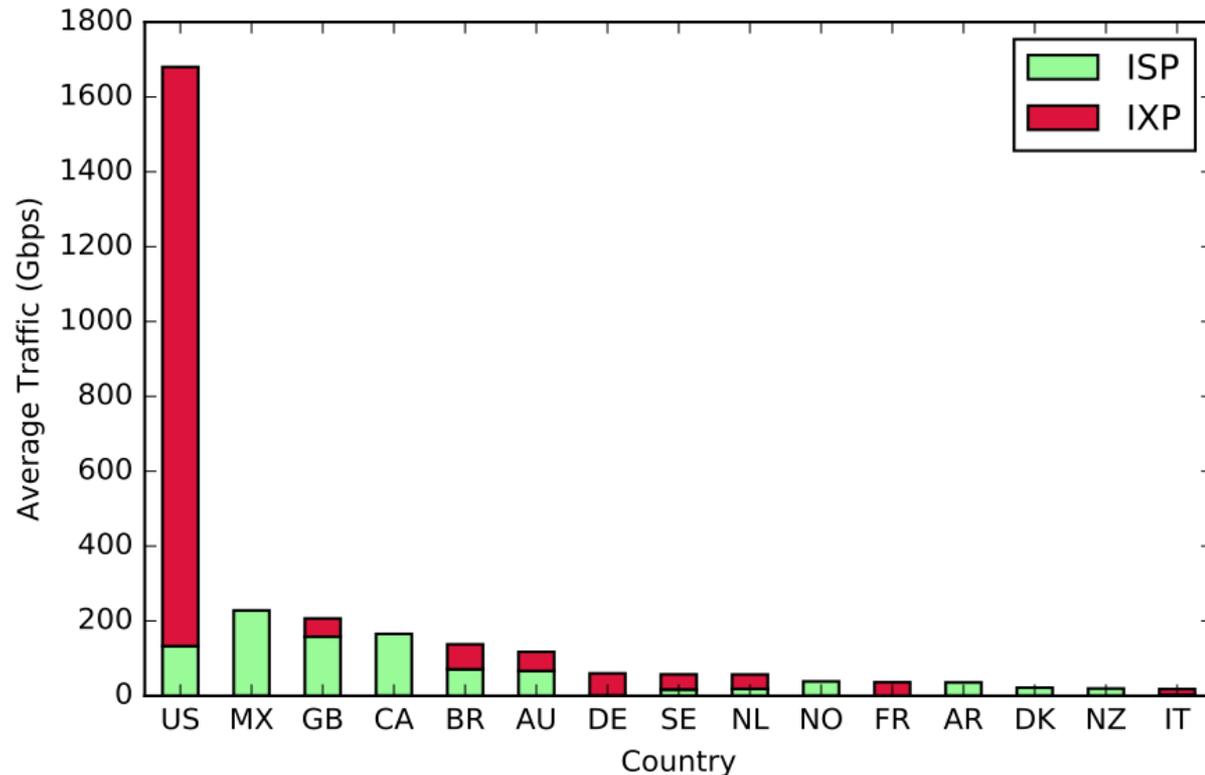

Estimated global traffic pattern

- North America dominates
- Followed by Europe (UK mostly)
- Central/South America unexpectedly third (Mexico and Brazil)

Traffic per country

- Total traffic:
 - Expected:
 - USA
 - Canada
 - GB
 - Australia
 - Interesting:
 - Mexico
 - Brazil

Lessons Learned

- First ever mapping of Netflix's OpenConnect CDN
 - Physical server distribution
 - Virtual expansion
 - Traffic estimation
- Exposing Netflix' overall server placement strategy
- Different markets require region-specific deployments
 - Differences between the local Internet Ecosystems
